
3.3-V DUAL PLL MULTICLOCK GENERATOR

FEATURES

- 27-MHz Master Clock Input
- Generated Audio System Clock (PLL1707):
  - SCKO0: 768 f_S (f_S = 44.1 kHz)
  - SCKO1: 768 f_S, 512 f_S (f_S = 48 kHz)
  - SCKO2: 256 f_S (f_S = 32, 44.1, 48, 64, 88.2, 96 kHz)
  - SCKO3: 384 f_S (f_S = 32, 44.1, 48, 64, 88.2, 96 kHz)
- Generated Audio System Clock (PLL1708):
  - SCKO0: 768 f_S (f_S = 44.1 kHz)
  - SCKO1: 768 f_S, 512 f_S, 384 f_S, 256 f_S (f_S = 48 kHz)
  - SCKO2: 256 f_S (f_S = 16, 22.05, 24, 32, 44.1, 48, 64, 88.2, 96 kHz)
  - SCKO3: 384 f_S (f_S = 16, 22.05, 24, 32, 44.1, 48, 64, 88.2, 96 kHz)
- Zero PPM Error Output Clocks
- Low Clock Jitter: 50 ps (Typical)
- Multiple Sampling Frequencies (PLL1707):
  - f_S = 32, 44.1, 48, 64, 88.2, 96 kHz
- Multiple Sampling Frequencies (PLL1708):
  - f_S = 16, 22.05, 24, 32, 44.1, 48, 64, 88.2, 96 kHz
- 3.3-V Single Power Supply
- PLL1707: Parallel Control
  PLL1708: Serial Control
- Package: 20-Pin SSOP (150 mil), Lead-Free Product

APPLICATIONS

- HDD + DVD Recorders
- DVD Recorders
- HDD Recorders
- DVD Players
- DVD Add-On Cards for Multimedia PCs
- Digital HDTV Systems
- Set-Top Boxes

DESCRIPTION

The PLL1707† and PLL1708† are low cost, phase-locked loop (PLL) multiclock generators. The PLL1707 and PLL1708 can generate four system clocks from a 27-MHz reference input frequency. The clock outputs of the PLL1707 can be controlled by sampling frequency-control pins and those of the PLL1708 can be controlled through serial-mode control pins. The device gives customers both cost and space savings by eliminating external components and enables customers to achieve the very low-jitter performance needed for high performance audio DACs and/or ADCs. The PLL1707 and PLL1708 are ideal for MPEG-2 applications which use a 27-MHz master clock such as DVD recorders, HDD recorders, DVD add-on cards for multimedia PCs, digital HDTV systems, and set-top boxes.

†The PLL1707 and PLL1708 use the same die and they are electrically identical except for mode control.

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range unless otherwise noted(1)

	PLL1705 AND PLL1706
Supply voltage: V_{CC}, $V_{DD}1$–$V_{DD}3$	4 V
Supply voltage differences: V_{CC}, $V_{DD}1$–$V_{DD}3$	±0.1 V
Ground voltage differences: AGND, DGND1–DGND3	±0.1 V
Digital input voltage: FS1 (MD), FS2 (MC), SR (MS), CSEL	– 0.3 V to (V_{DD} + 0.3) V
Analog input voltage, XT1, XT2	– 0.3 V to (V_{CC} + 0.3) V
Input current (any pins except supplies)	±10 mA
Ambient temperature under bias	–40°C to 125°C
Storage temperature	–55°C to 150°C
Junction temperature	150°C
Lead temperature (soldering)	260°C, 5 s
Package temperature (IR reflow, peak)	260°C

(1) Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

all specifications at T_A = 25°C, $V_{DD}1$–$V_{DD}3$ (= V_{DD}) = V_{CC} = 3.3 V, f_M = 27 MHz, crystal oscillation, f_S = 48 kHz (unless otherwise noted)

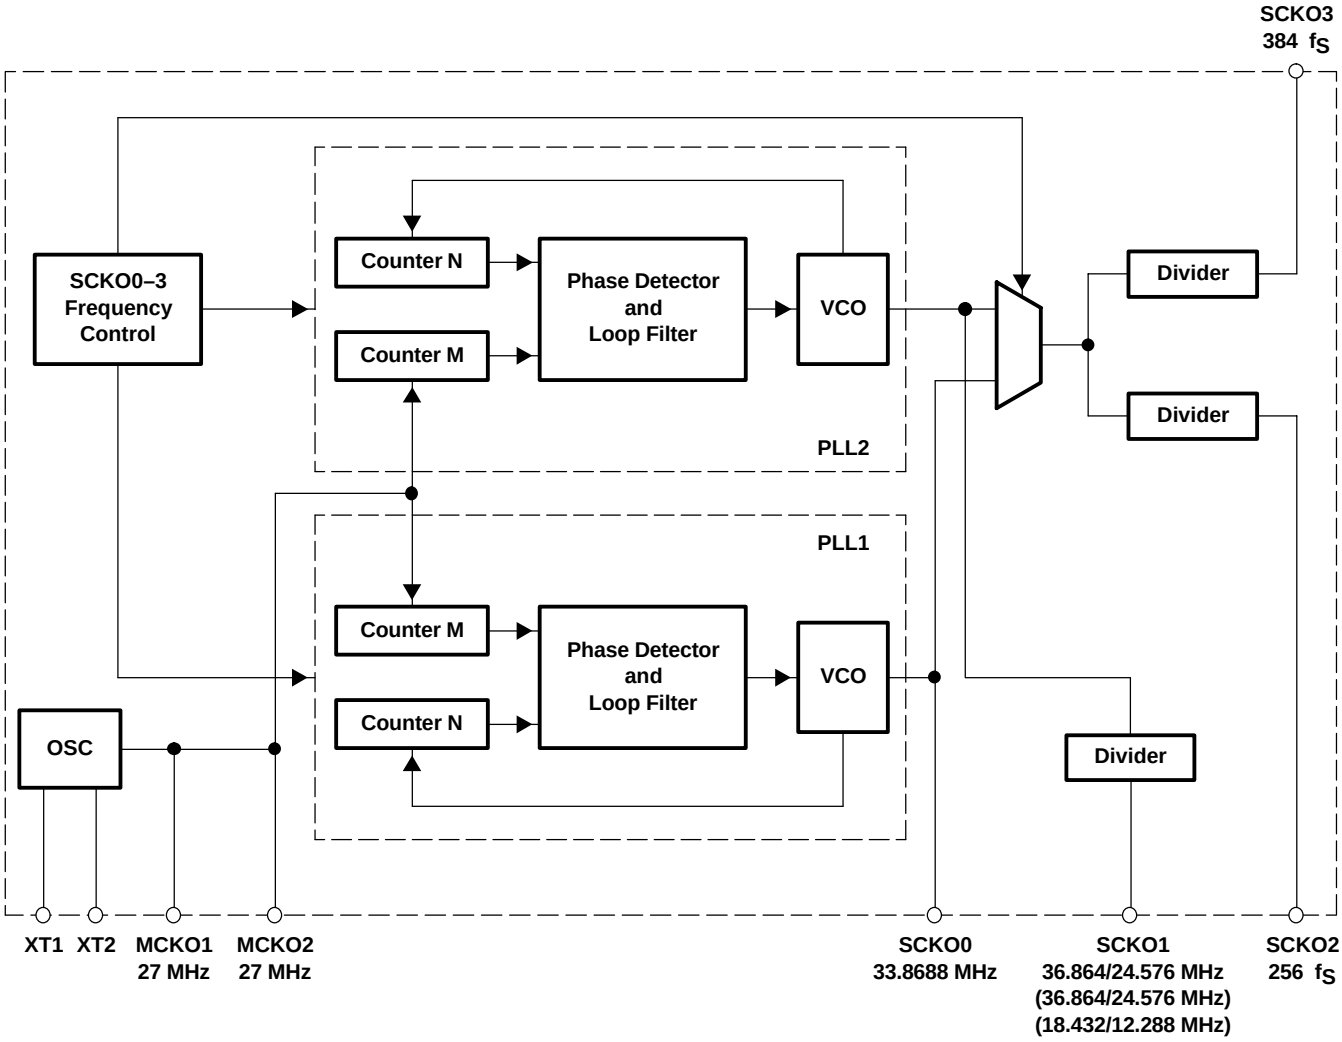
THEORY OF OPERATION

MASTER CLOCK AND SYSTEM CLOCK OUTPUT

The PLL1707/8 consists of a dual PLL clock and master clock generator which generates four system clocks and two buffered 27-MHz clocks from a 27-MHz master clock. Figure 7 shows the block diagram of the PLL1707/8. The PLL is designed to accept a 27-MHz master clock.



( ): PLL1708

Figure 7. Block Diagram

The master clock can be either a crystal oscillator placed between XT1 (pin 10) and XT2 (pin 11), or an external input to XT1. If an external master clock is used, XT2 must be open. Figure 8 illustrates possible system clock connection options, and Figure 9 illustrates the 27-MHz master clock timing requirement.

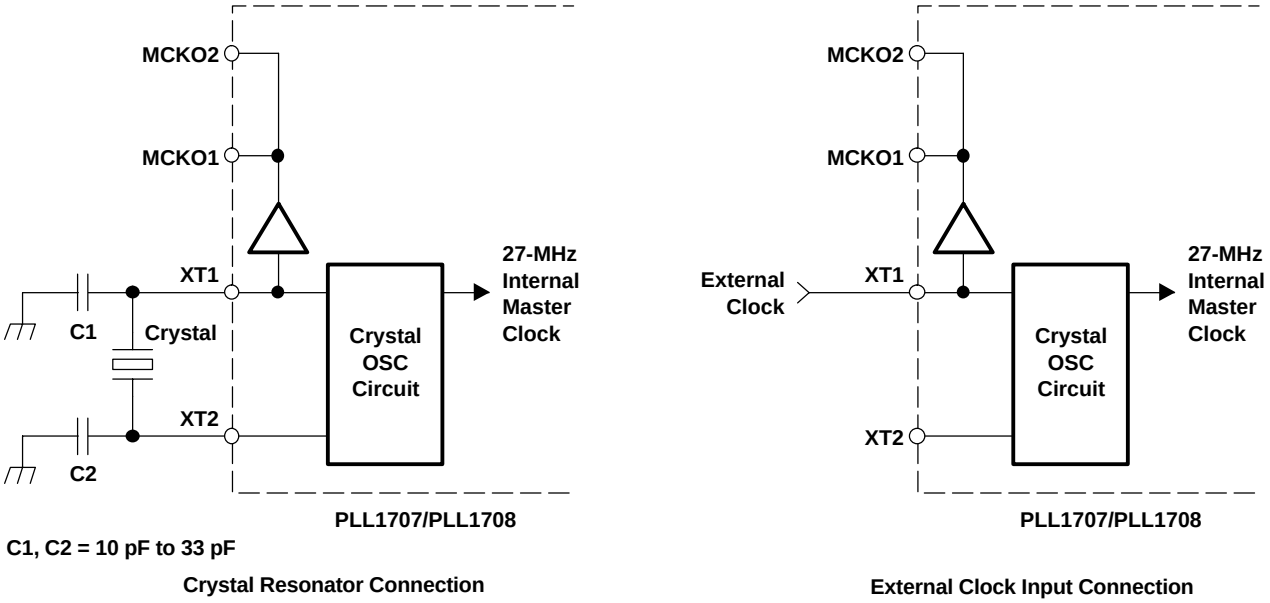


Figure 8. Master Clock Generator Connection Diagram

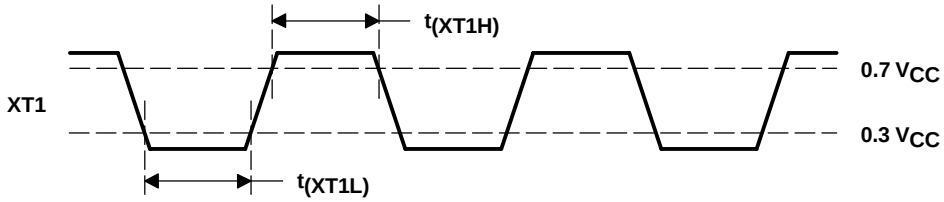

DESCRIPTION	SYMBOL	MIN	MAX	UNIT
Master clock pulse duration HIGH	$t_{(XT1H)}$	10		ns
Master clock pulse duration LOW	$t_{(XT1L)}$	10		ns

Figure 9. External Master Clock Timing Requirement

The PLL1707/8 provides a very low-jitter, high-accuracy clock. SCKO0 outputs a fixed 33.8688-MHz clock, SCKO1 outputs 256 f_S, 384 f_S 512 f_S, or 768 f_S (f_S = 48 kHz) which is selected by hardware or software control. The output frequency of the remaining clocks is determined by the sampling frequency (f_S) under hardware or software control. SCKO2 and SCKO3 output 256-f_S and 384-f_S system clocks, respectively. Table 2 shows each sampling frequency which can be programmed. The system clock output frequencies for programmed sampling frequencies are shown in Table 3. The half sampling frequencies on SCKO2 and SCKO3 and 256 f_S and 384 f_S on SCKO1 are supported only on the PLL1708.

Table 1. Generated System Clock SCKO1 Frequency

f_S	SCKO1 FREQUENCY
256 f_S†	12.288 MHz
384 f_S†	18.432 MHz
512 f_S	24.576 MHz
768 f_S	36.864 MHz

† PLL1708 only

Table 2. Sampling Frequencies

SAMPLING RATE	SAMPLING FREQUENCY (kHz)		
Half sampling frequencies†	16	22.05	24
Standard sampling frequencies	32	44.1	48
Double sampling frequencies	64	88.2	96

† PLL1708 only

Table 3. Sampling Frequencies and System Clock Output Frequencies

SAMPLING FREQUENCY (kHz)	SAMPLING RATE	256 f_S SCKO2 (MHZ)	384 f_S SCKO3 (MHZ)
16†	Half	4.096	6.144
22.05†	Half	5.6448	8.4672
24†	Half	6.144	9.216
32	Standard	8.192	12.288
44.1	Standard	11.2896	16.9344
48	Standard	12.288	18.432
64	Double	16.384	24.576
88.2	Double	22.5792	33.8688
96	Double	24.576	36.864

† PLL1708 only

Response time from power on (or applying the clock to XT1) to SCKO settling time is typically 3 ms. Delay time from sampling frequency change to SCKO settling is 300 ns maximum. Figure 10 illustrates SCKO transient timing in the PLL1708.

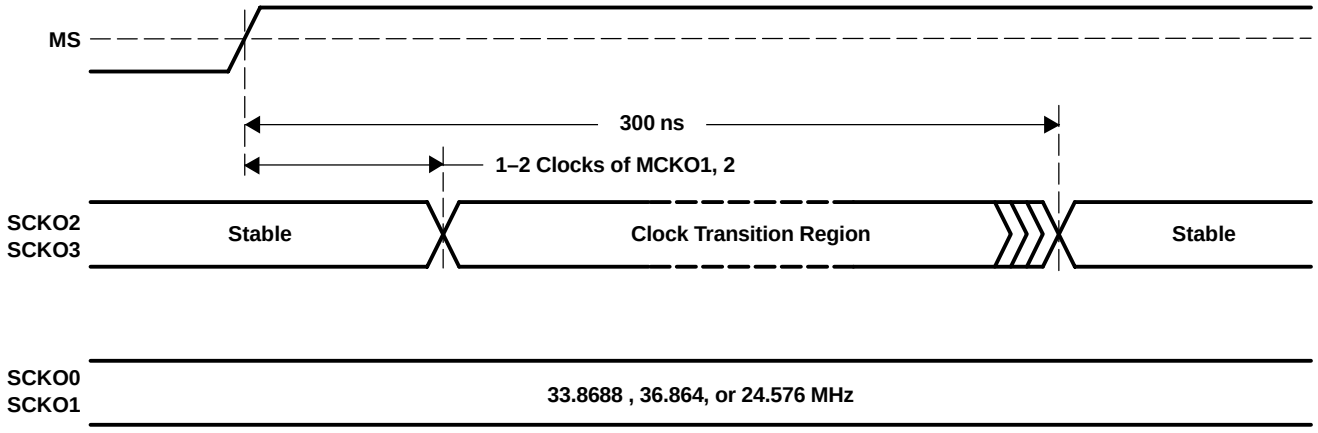

Figure 10. System Clock Transient Timing

The delay time for hardware control to use SR, FS2, FS1, or CSEL is 150 ns maximum. Figure 11 illustrates SCKO transient timing in the PLL1707. Clock transient timing is not synchronized with the SCKOs. External buffers are recommended on all output clocks in order to avoid degrading the jitter performance of the PLL1707/8.

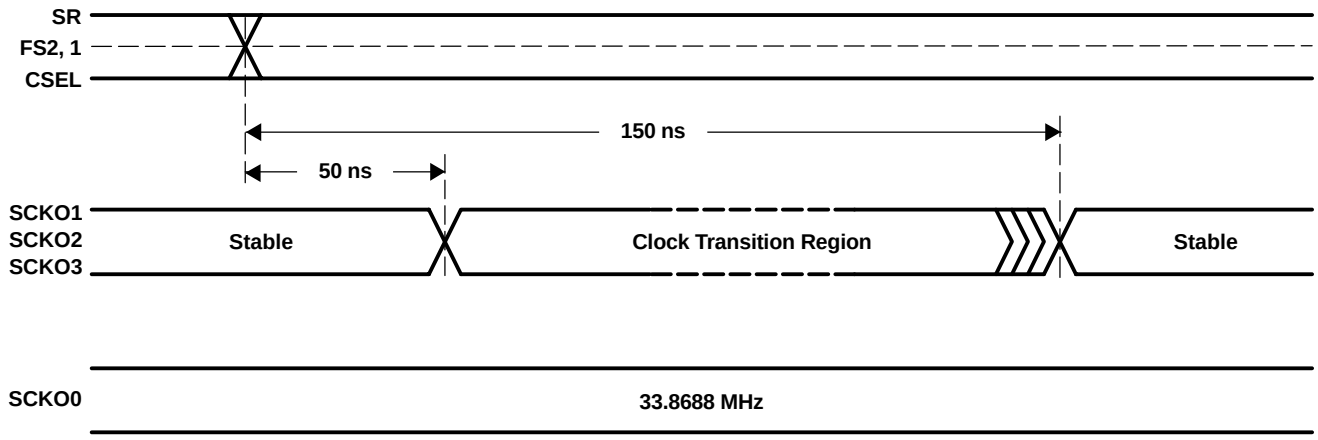

Figure 11. SCKO Transient Timing

POWER-ON RESET

The PLL1707/8 has an internal power-on reset circuit. The mode register of the PLL1708 is initialized with default settings by power-on reset. Throughout the reset period, all clock outputs are enabled with the default settings after power-up time. Initialization by internal power-on reset is done automatically during 1024 master clocks at V_{DD} > 2.0 V (TYP). Power-on reset timing is shown in Figure 12.

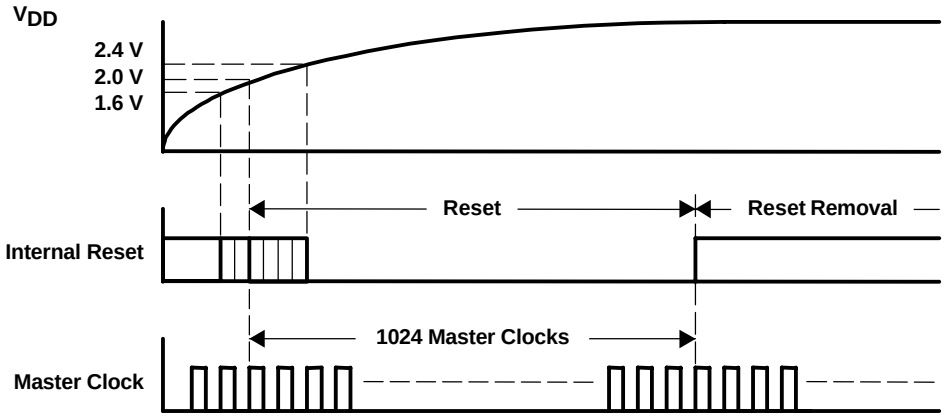

Figure 12. Power-On Reset Timing

FUNCTION CONTROL

The built-in functions of the PLL1707 can be controlled in the parallel mode (hardware mode), which uses SR (pin 7), FS1 (pin 5) and FS2 (pin 6). The PLL1708 can be controlled in the serial mode (software mode), which has a three-wire interface using MS (pin 7), MC (pin 6), and MD (pin 5). The selectable functions are shown in Table 4.

Table 4. Selectable Functions

SELECTABLE FUNCTION	PARALLEL MODE	SERIAL MODE
Sampling frequency select (32 kHz, 44.1 kHz, 48 kHz)	Yes	Yes
Sampling rate select (standard/double)	Yes	Yes
Sampling rate select (half)	No	Yes
Each clock output enable/disable	No	Yes
Power down	No	Yes
SCKO1 configuration	No	Yes

PLL1707 (Parallel Mode)

In the parallel mode, the following functions can be selected:

Sampling Frequency Group Select

The sampling frequency group can be selected by FS1 (pin 5) and FS2 (pin 6).

FS2 (PIN 6)	FS1 (PIN 5)	SAMPLING FREQUENCY
LOW	LOW	48 kHz
LOW	HIGH	44.1 kHz
HIGH	LOW	32 kHz
HIGH	HIGH	Reserved

Sampling Rate Select

The sampling rate can be selected by SR (pin 7)

SR (PIN 7)	SAMPLING RATE
LOW	Standard
HIGH	Double

System Clock SCKO1 Frequency Select

System clock SCKO1 frequency can be selected by CSEL (pin 12).

CSEL (PIN 12)	SCKO1 FREQUENCY
LOW	36.864 MHz
HIGH	24.576 MHz

PLL1708 (Serial Mode)

The built-in functions of the PLL1708 are shown in Table 5. These functions are controlled using the MS, MC, and MD serial control signals.

Table 5. Selectable Functions

SELECTABLE FUNCTION	DEFAULT
Sampling frequency select (32 kHz, 44.1 kHz, 48 kHz)	48-kHz group
Sampling rate select (half, standard, double)	Standard
Each clock output enable/disable	Enabled
Power down	Disabled
SCKO1 configuration	36.864 MHz, 24.576 MHz

Program-Register Bit Mapping

The built-in functions of the PLL1708 are controlled through a 16-bit program register. This register is loaded using MD, MC and MS. After the 16 data bits are clocked in using the rising edge of MC, MS is used to latch the data into the register. Table 6 shows the bit mapping of the register. The serial mode control format and control data input timing are shown in Figure 13 and Figure 14, respectively.

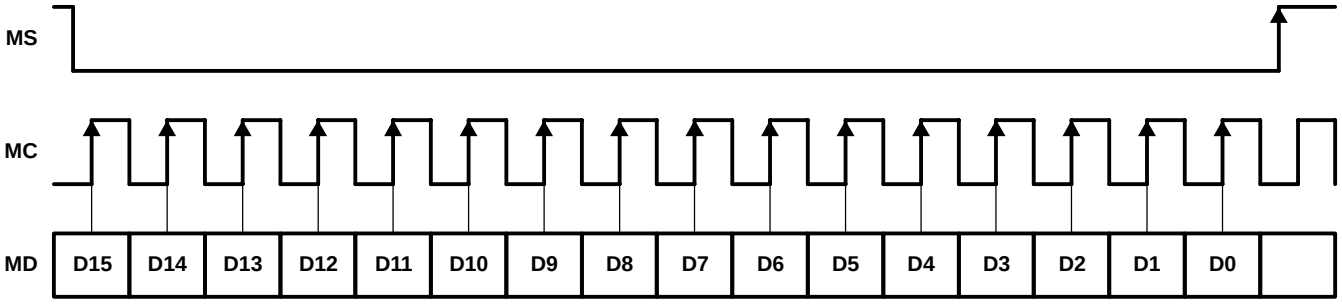

Figure 13. Serial Mode Control Format

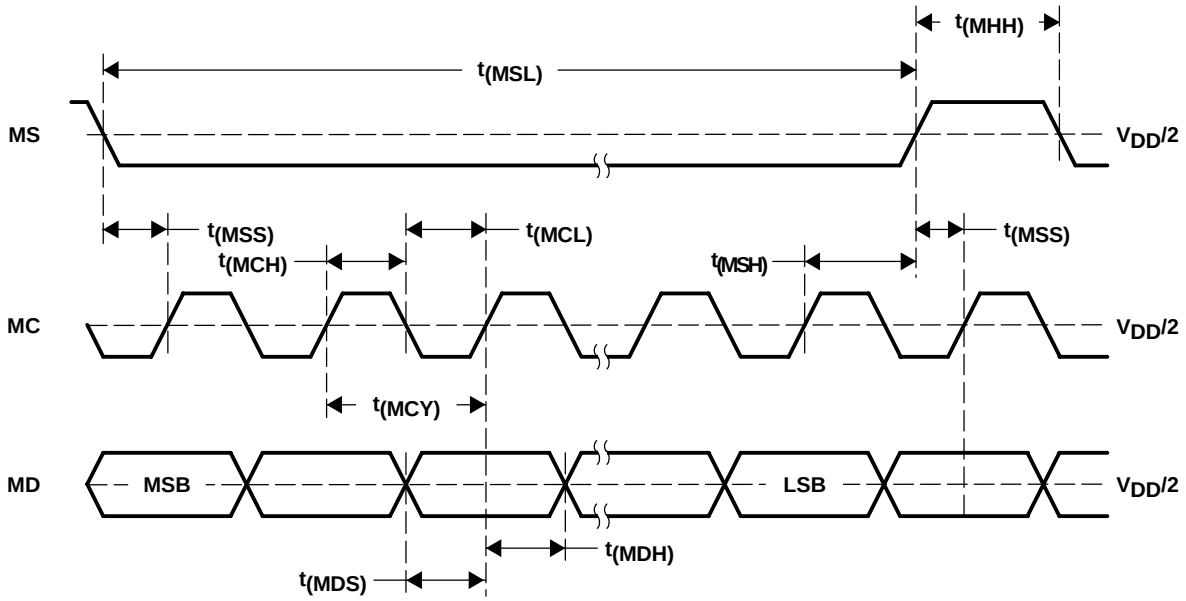

DESCRIPTION	SYMBOL	MIN	TYP	MAX	UNIT
MC pulse cycle time	$t_{(MCY)}$	100			ns
MC pulse duration LOW	$t_{(MCL)}$	40			ns
MC pulse duration HIGH	$t_{(MCH)}$	40			ns
MD hold time	$t_{(MDH)}$	40			ns
MD setup time	$t_{(MDS)}$	40			ns
MS low-level time	$t_{(MSL)}$	16			MC clocks(1)
MS high-level time	$t_{(MHH)}$	200			ns
MS hold time(2)	$t_{(MSH)}$	40			ns
MS setup time(3)	$t_{(MSS)}$	40			ns

(1) MC clocks: MC clock period
(2) MC rising edge for LSB to MS rising edge
(3) MS rising edge to the next MC rising edge. If the MC clock is stopped after the LSB, any MS rise time is accepted.

Figure 14. Control Data Input Timing

Table 6. Mode Register Mapping

REGISTER	BIT NAME	DESCRIPTION
Mode control	CE6	MCKO2 output enable/disable
	CE5	MCKO1 output enable/disable
	CE4	SCKO1 output enable/disable
	CE3	SCKO3 output enable/disable
	CE2	SCKO2 output enable/disable
	CE1	SCKO0 output enable/disable
	SR[2:1]	Sampling rate select
	FS[2:1]	Sampling frequency select

FS[2:1]: Sampling Frequency Group Select

FS2	FS1	SAMPLING FREQUENCY
0	0	48 kHz (default)
0	1	44.1 kHz
1	0	32 kHz
1	1	Reserved

SR[2:1]: Sampling Rate Select

SR2	SR1	SAMPLING RATE
0	0	Standard (default)
0	1	Double
1	0	Half
1	1	Reserved

CE [6:1]: Clock Output Control

CE1–CE6	CLOCK OUTPUT CONTROL
0	Clock output disable
1	Clock output enable (default)

While all the bits of CE [6:1] are 0, the PLL1708 goes into the power-down mode, all dynamic operation including PLLs and the oscillator halts, but serial mode control is enabled for resumption.

Configuration Register

D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0

REGISTER	BIT NAME	DESCRIPTION
Configuration	RSV	Reserved, must be 0
	CFG1	SCKO1 configuration

CFG1: SCKO1 Configuration Control

CFG1	CONFIGURATION 1
0	36.864 MHz, 24.576 MHz for SCKO1 (default)
1	18.432 MHz, 12.288 MHz for SCKO1

The system clock SCKO1 frequency can be selected by CSEL (pin 12) and CFG1 (register).

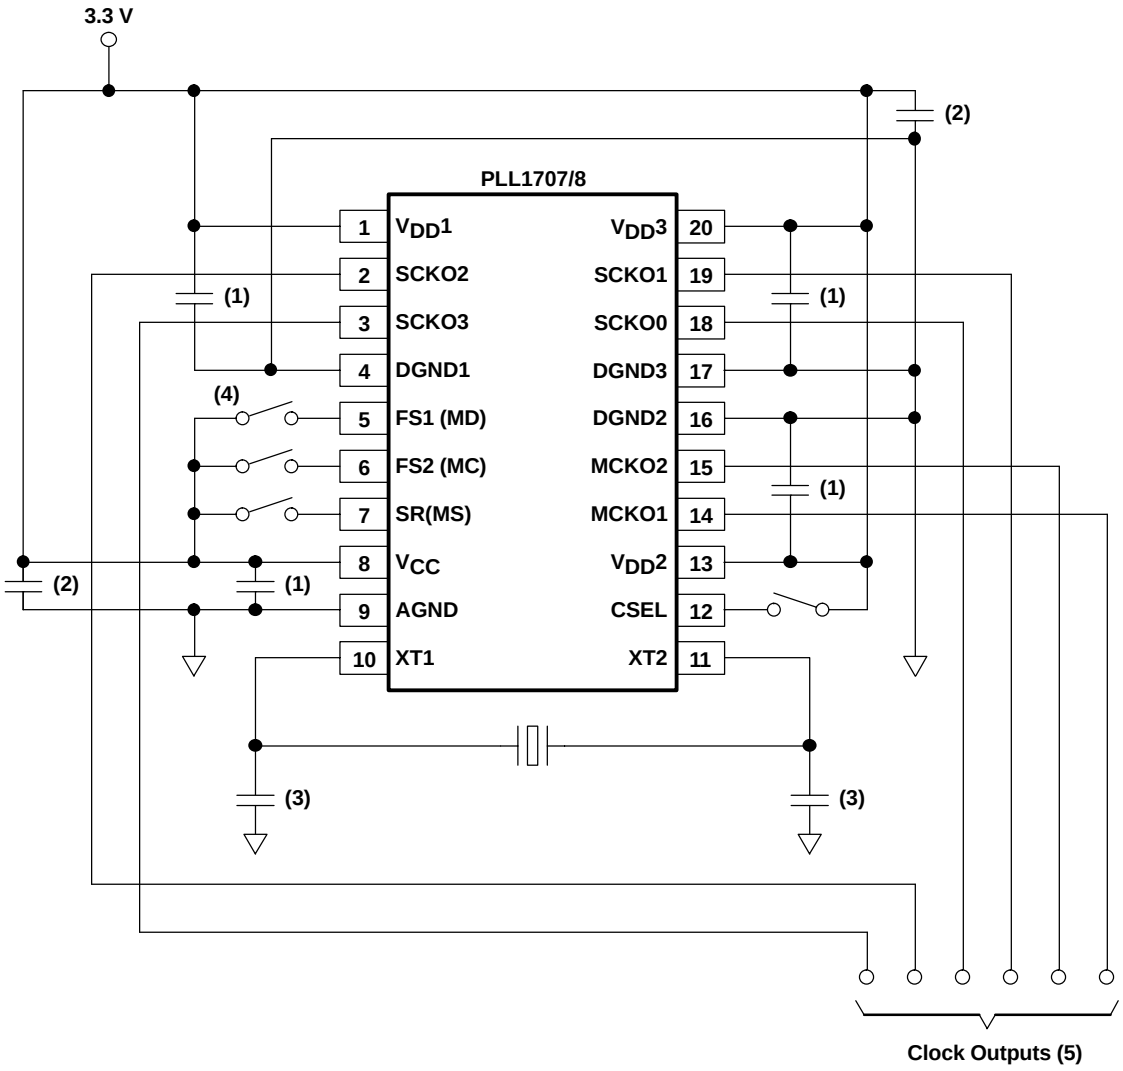
CFG1 (REGISTER)	CSEL (PIN 12)	SCKO1
0	LOW	36.864 MHz
0	HIGH	24.576 MHz
1	LOW	18.432 MHz
1	HIGH	12.288 MHz

CONNECTION DIAGRAM

Figure 15 shows the typical connection circuit for the PLL1707. There are four grounds for digital and analog power supplies. However, the use of one common ground connection is recommended to avoid latch-up or other power-supply-related troubles. Power supplies should be bypassed as close as possible to the device.

MPEG-2 APPLICATIONS

Typical applications for the PLL1707/8 are MPEG-2 based systems such as DVD recorders, HDD recorders, DVD players, DVD add-on cards for multimedia PCs, digital HDTV systems, and set-top boxes. The PLL1707/8 provides audio system clocks for a CD-DA DSP, DVD DSP, Karaoke DSP, ADC(s), and DAC(s) from a 27-MHz video clock.



(1) 0.1-µF ceramic capacitor typical, depending on quality of power supply and pattern layout
(2) 10-µF aluminum electrolytic capacitor typical, depending on quality of power supply and pattern layout
(3) 27-MHz quartz crystal and 10–33 pF × 2 ceramic capacitors, which generate the appropriate amplitude of oscillation on XT1/XT2
(4) This connection is for PLL1707 (parallel mode); when PLL1708 (serial mode) is to be used, control pins must be connected to serial interfaced controller.
(5) For good jitter performance, minimize the load capacitance on the clock output. It is recommended to drive the clock outputs through buffers, especially if there are heavy loads on SCKO0 and SCKO1, and to minimize mutual interference by separating them or inserting a guard pattern between them.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)
PLL1707DBQ	ACTIVE	SSOP/ QSOP	DBQ	20	50	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PLL1707DBQG4	ACTIVE	SSOP/ QSOP	DBQ	20	50	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PLL1707DBQR	ACTIVE	SSOP/ QSOP	DBQ	20	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PLL1707DBQRE4	ACTIVE	SSOP/ QSOP	DBQ	20	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PLL1707DBQRG4	ACTIVE	SSOP/ QSOP	DBQ	20	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PLL1708DBQ	ACTIVE	SSOP/ QSOP	DBQ	20	50	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PLL1708DBQG4	ACTIVE	SSOP/ QSOP	DBQ	20	50	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PLL1708DBQR	ACTIVE	SSOP/ QSOP	DBQ	20	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PLL1708DBQRG4	ACTIVE	SSOP/ QSOP	DBQ	20	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM

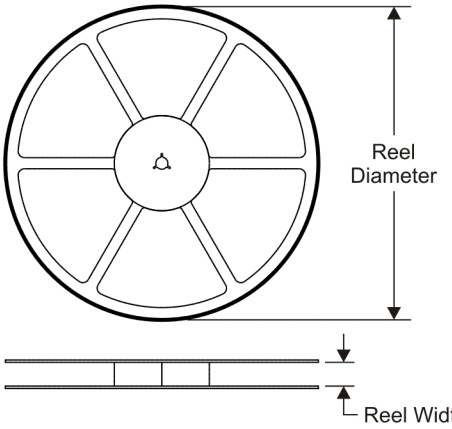
(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

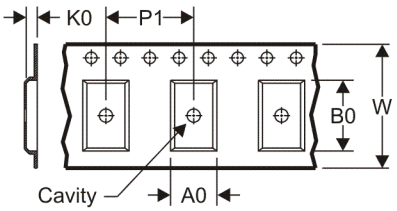
(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

TAPE AND REEL INFORMATION

REEL DIMENSIONS

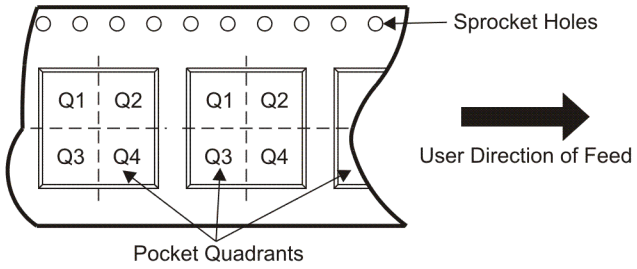


TAPE DIMENSIONS



A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

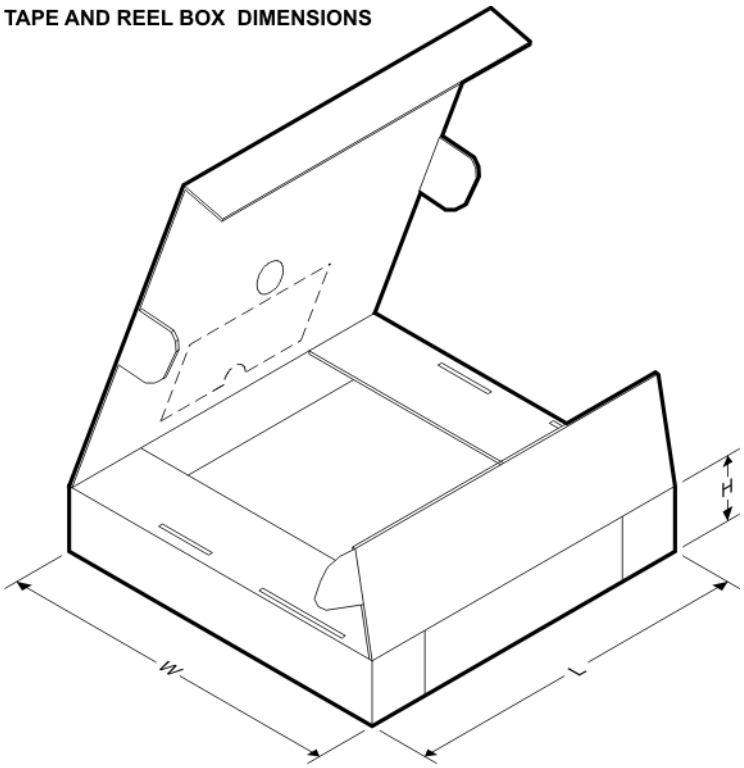
QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE



*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
PLL1707DBQR	SSOP/ QSOP	DBQ	20	2000	330.0	16.4	6.5	9.0	2.1	8.0	16.0	Q1
PLL1708DBQR	SSOP/ QSOP	DBQ	20	2000	330.0	16.4	6.5	9.0	2.1	8.0	16.0	Q1

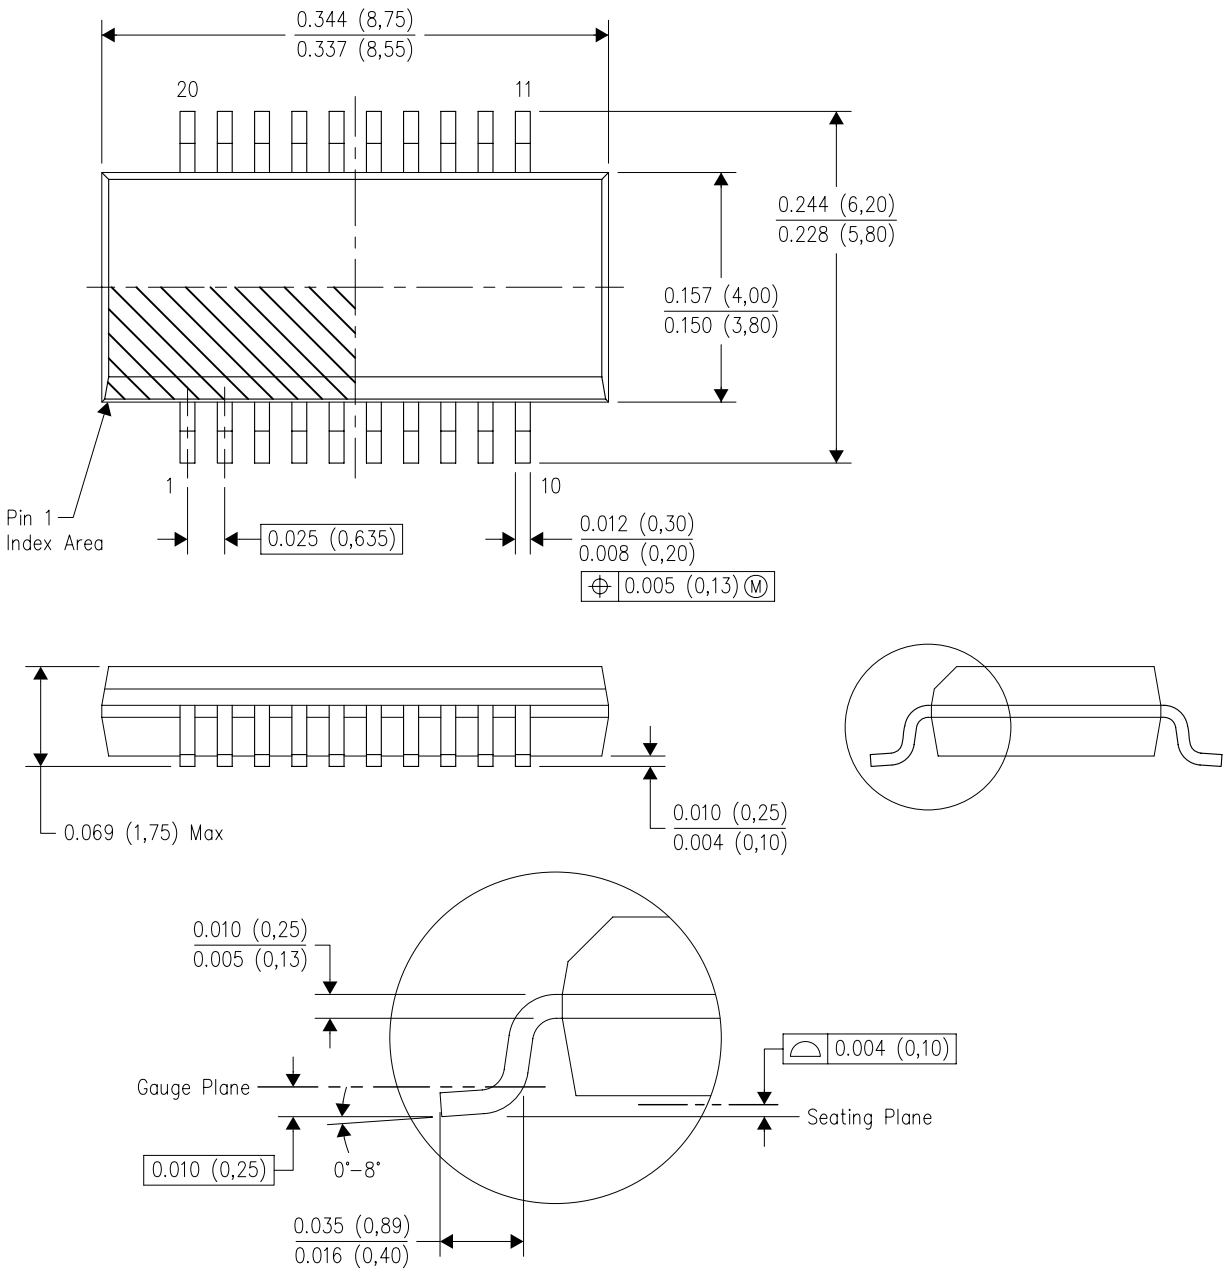
TAPE AND REEL BOX DIMENSIONS



*All dimensions are nominal

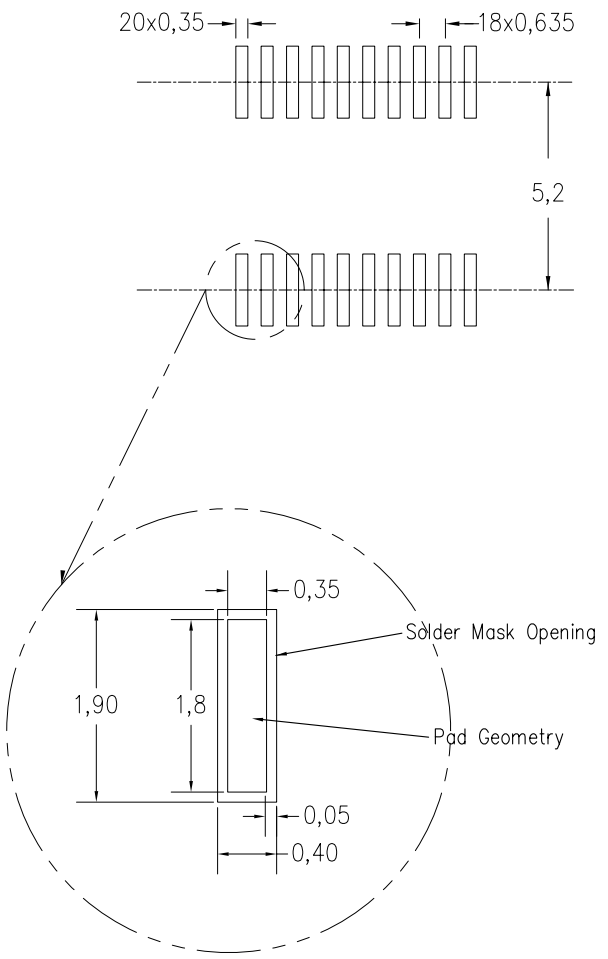
Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
PLL1707DBQR	SSOP/QSOP	DBQ	20	2000	346.0	346.0	33.0
PLL1708DBQR	SSOP/QSOP	DBQ	20	2000	346.0	346.0	33.0

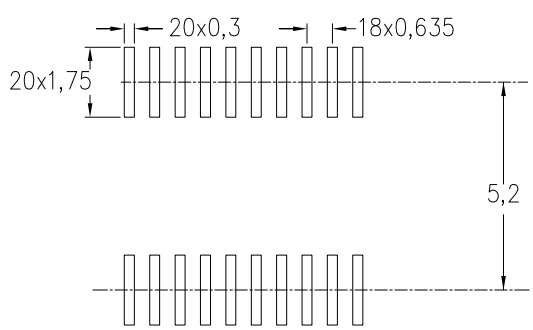
DBQ (R–PDSO–G20) PLASTIC SMALL–OUTLINE PACKAGE



NOTES:
A. All linear dimensions are in inches (millimeters).
B. This drawing is subject to change without notice.
C. Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15) per side.
D. Falls within JEDEC MO–137 variation AD.

DBQ (R–PDSO–G20) PLASTIC SMALL OUTLINE PACKAGE





4210335–3/B 06/10

NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
D. Publication IPC–7351 is recommended for alternate designs.
E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC–7525 for other stencil recommendations.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
